Academic Year: 2021-2022 Semester: Second

Date: 12/6/2022 Level: Diploma

Course Title:	Course code: CS522	Time: 2 Hours	Exam marks: 100	# Exam. Sheets: 13 Pages
			100	

Exam. Instructions : <u>ANSWER THE FOLLOWING</u>
<u>QUESTIONS in Python</u>

نموذج: (أ)

Question 1:

Choose the correct answer for each of the following:

- 1. Which of the following **assign** an **integer** value to a **variable** correctly?
 - (a) x=25
- **(b)** x='hello'
- (c) 2x=5
- (\underline{d}) 2x='hello'
- 2. Which of the following is a **loop without body**?
- (a) x=3 while(x>3)

(<u>b</u>) x=3 while(x>3);

(c) x=3 while(x>3) {}

- 3. Which of the following is a correct **comment** in python?
- (a) #comment

(**b**) "comment

(c) ?comment

(<u>d</u>) */comment/*

4. What is the index number of the last element of a tuple with 50 elements ?					
<u>(a)</u> 50	<u>(b)</u> 49	<u>(c)</u> -1	(<u>d)</u> b and c		
5 m 1					
	ression is assigned to				
<u>(a)</u> last <u>(b)</u>	<u>(c)</u>	var <u>(</u>	<u>d)</u> exp		
6. What is the output	of the following:				
•	A=25				
	print(a)				
(<u>a)</u> error	<u>(b)</u> 25	<u>(c)</u> a	<u>(d)</u> A		
7. Which of the followi	ng is used to initialize	multinle variahl	es with a common		
value?	ing is used to initialize	munipic variabi	cs with a common		
(a) $x = y$: $y = 33$		$(\underline{b}) \mathbf{x} = \mathbf{y}$	= z = 33		
(c) $x = z; y = z; x = 33;$			& $z = 33$		
<u>107</u>		<u>(w)</u>			
a = input("enter your input: ") print(type(a))					
<u>(a)</u> int <u>(b)</u>	string (<u>b)</u> float	<u>(d)</u> bool		
9. $x = '24' + '16'$ print(x)					
(a) 40 (b)	x <u>(b)</u>	21	(<u>d</u>) 2416		
10 can store different types of values					
(a) variable (b)	<u>)</u> <mark>list (<u>c)</u> fu</mark>	nction (d	a and c		

Question 2:

Choose the equivalent code for each of the following:

```
x=3
if x>3:
    print('x>3')
elif x<3:
    print('x < 3')
else:
    print('x = 3')
```

- (a) x=3if x>3 print('x>3') elif x<3 print('x<3') else print('x = 3')
- (b) x=3if x>3 print('x>3') else if x<3 print('x<3') print('x = 3') else
- (c) x=3 print('x>3') if x>3 else print('x<3') if x<3 else print('x = 3')
- (d) x=3 print('x>3') if x>3 if x<3 print ('x<3') print('x = 3') else
 - d={'k1': 25, 'k2': 46} **for** k, v in d.items(): print(k, v)
 - (a) d={'k1': 25, 'k2': 46} for k in d: print(k, d[k])

- (b) d={'k1': 25, 'k2': 46} for k in d.items(): print(d)

```
13.
           num=35
           if num%2==0:
                 print('even')
           else:
                 print('odd')
        num=35
<u>(a)</u>
        print([num%2==0]('odd', 'even'))
         num=35
<u>(b)</u>
         print([num%2==0]('even', 'odd'))
         num=35
<u>(c)</u>
        print(('even', 'odd')[num%2==0])
         num=35
(d)
         print(('odd', 'even')[num\%2==0])
                         alpha=('a', 'b', 'c', 'd')
                         for i in range(len(alpha)):
  14.
                               print(alpha[i])
                                                              alpha= ('a', 'b', 'c', 'd')
        alpha= ('a', 'b', 'c', 'd')
  <u>(a)</u>
                                                       <u>(b)</u>
                                                             for i in range(len(alpha)):
        for i in range(len(alpha)):
                                                                   print(alpha)
              print(i)
                                                             alpha= ('a', 'b', 'c', 'd')
        alpha= ('a', 'b', 'c', 'd')
  <u>(c)</u>
                                                       <u>(d)</u>
        for i in alpha:
                                                             for i in range(len(alpha)):
         print(i)
                                                                   pass
```

$$\underbrace{(a)}_{z=[i \text{ for } i \text{ in range}(3)]}^{x=3}$$

$$(b) \qquad x=3 \\ z = [i]$$

(c)
$$x=3$$

 $z =$ for i in range(3) [i]

$$\frac{(d)}{z = [\text{ for } i \text{ in } range(3) \quad i] }$$

$$\begin{array}{c} (a) & z=[\] \\ z[0]=3 \end{array}$$

$$\underline{(b)} \qquad z=[] \\
z+=(3)$$

$$z=[\]$$
 $\underline{(d)}$
 $z[-1]=3$

Question 3:

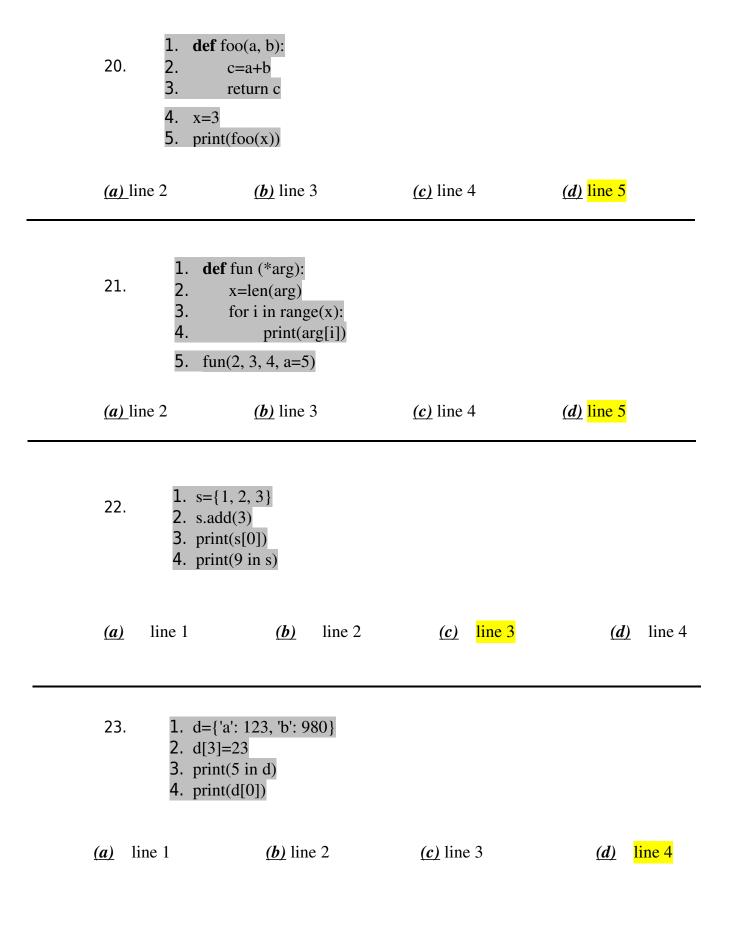

Choose the error line number in each of the following:

- 1. x=122. y=417.
 - 3. fun(x, y)
 - 4. **def** fun(x, y):
 - print(x, y)5.
- (a) line 1
- **(b)** line 2
- (c) line 5

(d) line 3

- 1. **def** calculate(a, b, c=[], d): 18.
 - return a+b-d
 - 3. w=x=3
 - 4. y, z=5, [1, 2]
 - 5. print(calculate(x, y, z, w)
- (a) line 1
- **(b)** line 2
- **(c)** line 3
- (d) line 4

- 1. **def** square(**nums, x): 19.
 - 2. sqnums={}
 - 3. for num, val in nums.items():
 - sqnums[num] = val**2
 - 5. return sqnums
 - 6. x=square(q=2, f=4)
 - 7. print(x)
- (a) line 1
- **(b)** line 2
- (c) line 3
- (d) line 4

1. **def** exp (*nums, x): 24. for i in nums: 3. print(i) 4. $\exp(1, 4, 5, 7)$ (d) line 4 (a) line 1 **(b)** line 2 (c) line 3 1. x=525. 2. **if** x>0: 3. print('positive') 4. **else**: 5. print('negative') (c) line 3 (a) line 1 **(b)** line 2 (d) line 4 1. x={} 26. 2. x.add(2) $3. \ y=x$ 4. print(x) (b) line 2 (c) line 3 (a) line 1 (d) line 4

Question 4:

Choose the the correct output each of the following:

```
27. def myfun (a, b, c=[1, 2, 3]):

c.append(a)
c.append(b)
return c
x, y=4, 8
print(myfun(b=x, a=y))
```

- (a) [1, 2, 3, 8, 4]
- (b) no output
- (c) [1, 2, 3]
- <u>(d)</u> error

```
if -50 in range(-1, -100):

print('Yes')

else:

print('No')
```

- (a) Yes
- <u>(b)</u> No
- **(c)** error
- (d) output

```
def foo(*grades):

print(len(grades))
print(type(grades))

foo(96, 82, 70)
```

- (a) 3 tuple
- <u>(b)</u> 6
- (c) 3 Dictionary
- (d) 6 tuple

```
x=lambda a: a**2
 30.
       print(x(3))
                                             <u>(c)</u> 9
 (a) 6
                       (b) 3
                                                                    (d) 5
 31.

remove() remove an item from a set. If the item to remove
does not exist, remove() will raise an error.
set() creates a set.

add() adds an item to a set.

items() returns a list of dictionary's (key, value) tuple pairs.

len(x) returns the number of items in the collection x.

range(n) generates a sequence of numbers from zero to n-1.

append(n) add a single element to the end of the list

format() takes the passed arguments, formats them, and places them in the string where the placeholders {} are
